Hi Marty,

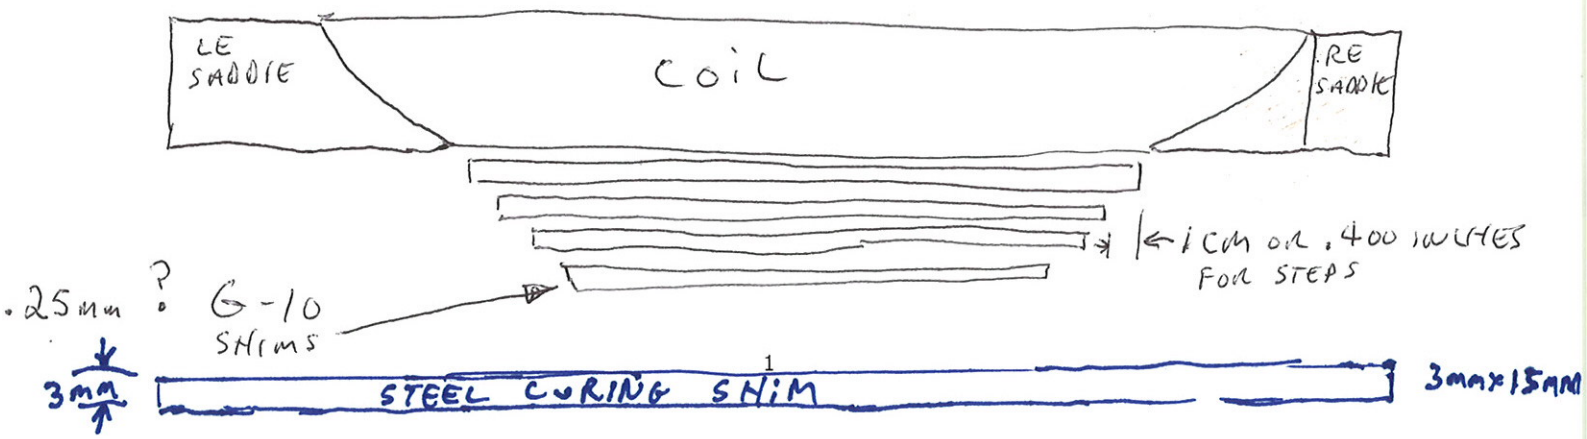
Please do the following:

1) Measure the iron on Kapton. It should be 16.5" wide by 180ft and 6.3mils total thickness. Then remove the polyester adhesive and measure the Kapton.

2) make a 0.5mm (~20mil) G-10 curing shim for 11-Tesla Dipole L1 & L2 between the saddles.

3) label 482202 keys to rev C

Thanks,
Fred

MBH02


MAY INCREASE SHIM THICKNESS TO 1mm TOTAL. FIND OUT FOR CERTAIN FROM RODGER BOSSERT BEFORE PACKAGING L1 FOR CURING.
